#### ***In the Claims***

1. (currently amended) A computer-implemented method of matching customer demand with a manufacturer supply of products from plurality of factory facilities, comprising using a computer to perform the steps of:

inputting demand data, using the computer, for a demand of at least one product requested by at least one customer and supply data corresponding to a production capacity of the factory facilities;

performing a first matching operation, using the computer, to match the demand data with the supply data to obtain a first demand-supply matching result;

collecting rematched demand data, using the computer, corresponding to a portion of the demand unsatisfied by the first matching operation from the demand data

Art Unit: 3687

and collecting rematched supply data corresponding to a portion of the production capacity unused in the first matching operation from the supply data;

classifying the rematched demand data, using the computer, into a plurality of classified demand data records according to at least one attribute of the at least one product and the at least one customer corresponding thereto, the classified demand data having different priorities wherein new customers and manufacturing processes are highest priority, existing customers and new manufacturing processes are next priority, and existing customers and manufacturing processes are lowest priority; and

performing a second matching operation, using the computer, to match the classified demand data with the rematched supply data based on the priorities of the classified demand data to obtain a second demand-supply matching result.

### ***Allowable Subject Matter***

1. Claims 1 – 33 are allowed.

### ***REASONS FOR ALLOWANCE***

2. The following is an examiner's statement of reasons for allowance: The most remarkable prior art of record is Kaneko et al. (US Patent Publication No. 2001/0020230) and Ham (US Patent No. 7,370,005).

Neither Kaneko or Ham discloses, “classifying the rematched demand data into a plurality of classified demand data records according to at least one attribute of the at

Art Unit: 3687

least one product and the at least one customer corresponding thereto, the classified demand data having different priorities wherein new customers and manufacturing processes are highest priority, existing customers and new manufacturing processes are next priority, and existing customers and manufacturing processes are lowest priority.”

None of the prior art of record remedies the deficiencies found in Kaneko and Ham. Furthermore, neither the prior art, the nature of the problem, nor knowledge of a person having ordinary skill in the art, provide any reasonable rationale to combine prior art teachings.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Goodale, John C “*A MARKET UTILITY-BASED MODEL FOR CAPACITY SCHEDULING IN MASS SERVICES*” Production & Operations Management, Summer 2003 v.12 n.2, pp: 165-185
